DUST COLLECTOR

MODEL # BC-625016

The BC-625016 is an ideal solution for those looking for an affordable option to their dust collection needs.

The BC-625016 can be used with existing blasting cabinets or can be purchased in combination with a Canbuilt blasting cabinet. A great feature of the BC-625016 is that it does not use any compressed air thereby limiting the impact to your abrasive blasting operation.

The BC-625016 is a modular, manual shaker type, dust collector requiring minimal supervision and maintenance.

As an open type dust collector, it is not restricted by the limitations imposed by the NFPA regulation, indicating that systems above 400 cfm need to be equipped with anti-deflagration devices.

MARKETS

- General manufacturing
- Aerospace and aviation
- Marine
- Automotive
- Petroleum
- Power & energy
- Pharmaceutical

FEATURES

- Dust collector features an energy-saving air-filtration system capturing 99% of all particles five (5) microns or larger.
- No anti-explosion devices required
- Low cost
- Small footprint
- Small footprint
- Ease of access to the filter bags
- Replacement bags are readily available anywhere on the market
- Can be operated with either pressure or suction sandblasting cabinets.
- CSA approved and made in Canada.

No other dust collector on the market today offers the many practical benefits included on a BC-625016 dust collector as standard equipment. The standard components on a BC-625016 have been carefully designed for safety, ease of operation, reduced maintenance and increased productivity.
